Part numbers 23268/23269

Fixed Change Ford Super Duty Sleeves

Q1: What benefit do these sleeves offer?

A1: These two sleeves are designed primarily for lifted trucks. When a lift kit is installed usually the caster angle is decrease because the front differential is rolled forward. This decrease in caster can make a vehicle wander and handle poorly. These sleeves give a fixed amount of caster and camber correction in order to regain some of the lost caster without having to change the driveline pinion angle.

Q2: Why two part numbers?

A2: The 23268 is designed for the left side and the 23269 is for the right side. The slight amount of difference between the two helps to fight right hand drift due primarily to road crown and will help make the vehicle track better.
