### Dodge/Jeep/Mitsubishi EZ Arm

**Q1: My OE control arm has two bushings; will the SPC arm with one bushing and one xAxis™ still work for my car?**

**A1:** Yes. The SPC arm is dimensionally the same as your O.E.M. arm. Many manufacturers are moving toward using a bushing on one end of the link and a cross axis ball joint on the other end. This set-up improves handling by decreasing compliance in the control arm. We are able to provide xAxis to match O.E.M. design or as an upgrade where applications allow.
