93490

Cross Shaft

Q1: The instructions say to install the cross-shaft with the arm offset to the front of the car. What exactly does that mean?

A1: The cross-shaft on the 94350 & 93490 adjustable upper control arms have a slight offset. The section from the bolt hole to the pivot is wider on one side than the other by about 11mm (0.4"). The wider span should go towards the front of the vehicle. This shifts the arm forward for proper alignment.
